Version 11.5.3

Release Notes · https://support.ontimesuite.com/docs/release-notes-otdom/version-11-5-3/

What’s New?

Desktop

- Enabled support for pasting comma-separated email lists into the Required, Optional and FYI fields.
- Made text values selectable for copying when previewing an event and in various parts of the desktop UI.
- Introduced a revamped design for the Out of Office Page.

Mobile

- Updated the Mobile interface to render the description field as HTML and include attachments.

Bug Fixes

Desktop

- Fixed an issue where copying a Poll to a new Poll did not copy the "Email Language" setting.
- Fixed an issue where inviting on a Poll did not copy the Description into the Body.
- Updated behavior so that when opening an individual user without Editor access, the Notice panel is now hidden instead of appearing empty.
- Fixed an issue where starting via URL worked correctly, but switching to Day view resulted in the wrong user being selected.
- Resolved an issue for added Zoom meetings where the Join button would either disappear or link to the wrong meeting, depending on whether the invitation was accepted from OnTime or Notes.

Main Servlet

- Fixed an issue where a repeated invitation sent from iNotes and accepted in OnTime caused calendar entries to be missing from the Notes Calendar interface, even though they appeared in OnTime.
