How to determine the USERDOMAIN for a license key

FAQ · https://support.ontimesuite.com/docs/faq-otms/how-to-determine-the-userdomain-for-a-license-key/

The license for OnTime requires the USERDOMAIN name of the Windows server on which the OnTime server runs. This is true for both trial and production environments.

You can find the USERDOMAIN by executing a `'Set'` command from a Command prompt. The machine you run the set command on, must be part of the same domain as your future OnTime server. Please make sure that you do not select the USERDNSDOMAIN)".

Please see the example below.
