Version 12.1.2

Release Notes · https://support.ontimesuite.com/docs/release-notes-otdom/version-12-1-2/

What’s New

Web Desktop

- Web Desktop Bug Turning on the Branding Logo could produce a “setHeight(...)” error. The logo now turns on without errors. This was a version 12.x regression.

Web Admin

- Improvement The Domino Commands menu in the Server view has been reorganized into a clearer structure and now includes more actions. Alongside Show Server and Show Tasks, commands are now grouped in submenus by task.

Configuration

- Task Servlet Improvement When OnTime checked the license against the server’s certifier, it compared the names with case sensitivity. A license issued to “xxx/TEST” was rejected on a server named “xxx/Test”. The check now ignores case, so the license is accepted no matter how the certifier name is capitalized.
- The Client database could not launch the UI after a manual (non-installer) install or after adding servers, because some required settings were not saved with the Server document.
