Version 6.3.1

Release Notes · https://support.ontimesuite.com/docs/release-notes-otms/version-6-3-1/

What’s New?

Backend

- SQL Blocking Optimization Rollback
  In version 6.3.0, new features were introduced to reduce SQL blocking and improve overall performance. However, in certain environments, these changes led to unforeseen issues that were not encountered during initial testing.As a precaution, these optimizations have been removed in this release pending further design review and testing to ensure stability across all supported environments.

Bug Fixes

Desktop

- Resolved an issue where using the "Copy to New Event" function with an existing description failed to retain the description in the new event, unless manually edited.Fixed an issue where invitees received meeting update emails when only catering was added or changed—this occurred specifically when the meeting also included an online meeting link.

Admin

- Fixed an issue where custom attributes were not displayed for resolved users on the domain page.
