Version 6.3.2

Release Notes · https://support.ontimesuite.com/docs/release-notes-otms/version-6-3-3/

What’s New?

Admin

- Removed the “Always show organizer on events” setting from the frontend options. This feature is now always enabled for users with Limited access or higher.

Backend

- Upgraded Apache Tomcat to version 10.1.43

Bug Fixes

Backend

- Fixed a login issue for users with email addresses containing a double "a" (e.g., aa@example.com).
- Resolved a problem where users couldn't log into OnTime when accessing it from Microsoft Teams.
- The Manual User Injection feature is now only available when using the Graph synchronization method, as it is not compatible with the legacy directory sync. This feature enables administrators to add individual users to OnTime without requiring a full directory synchronization.
